3.0 – Project Scope and Details

Background

The Township is in the process of obtaining the necessary data of its critical infrastructure to prepare necessary plans and policies required for proper asset management of its drainage/storm sewer assets in compliance with O. Reg. 588/17 (Asset Management). Considering the intent of this project to fulfil the municipality’s responsibilities under O.Reg 588/17, each bidder should be familiar with the scope and requirements for stormwater asset management under this regulation.

The Township completed a review of its storm sewer assets in 2018 for the Village of Portland, and are now seeking to get similar reviews completed of all storm sewer/drainage assets in the remaining villages in the Township.

Project Goals

The Township is seeking a detailed condition assessment of storm sewer drainage infrastructure in the Township’s villages to support the ongoing asset management planning that is underway at the Township and to meet its responsibilities under O.Reg 588/17.

The condition assessment is to review and document the following:

- the physical condition (type, material, location, size, condition/damage, estimated in-service date, estimated useful life, replacement cost) of the storm sewer asset
- the drainage performance of the asset (design drainage flow, actual flow, and actual needed for catchment area, etc.)
- recommendations for regular asset management/maintenance to maximize life cycle and optimize performance of the infrastructure.

Storm Sewer assets include, but are not limited to, drainage structures (catch basins, double catch basins, catch basin maintenance holes, and maintenance holes, etc.), storm sewer pipes, and outlets and open ditches that form each village’s drainage system.

The assessment deliverables should include the following components:

- summary of findings of the above condition assessment
- mapping of the drainage assets and catchment areas within each village (paper copy and digital format that is compatible with upload to GIS)
- spreadsheet documenting each asset, with the identification number on the Y-Axis, and the Asset ID, Class, Category, Segment, Sub-Segment, In-Service Date, Historical Cost, Valuation Cost, Amortization Method, Replacement Cost, Functional Class along the X-Axis

Project submission content and format is noted in Section 4.0 “Proposal Content.”

See Appendices I - III for maps of villages and approximate locations of catch basins to assist with estimating extent/scope of work. NOTE: These maps are superficial and approximate description only, and **do not represent the entirety of the stormwater system in each village.**

Attachments are available upon request:

2. Spreadsheet documenting Village of Portland Storm Sewer Assets
